

In many industries, certification is essential for achieving supplier status. Ensuring system quality, process quality and product quality in an organization as well as their testing and improvement is only possible today through a

Quality management system

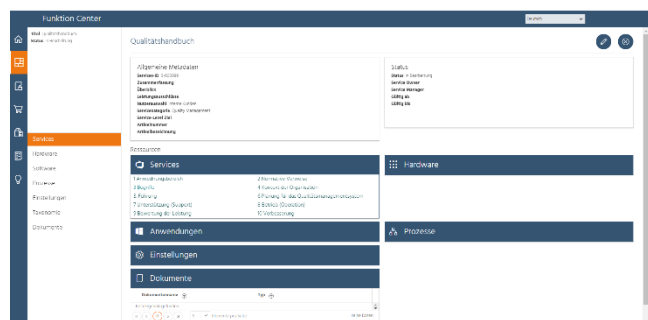

to be ensured. The aim is to achieve a lasting improvement in the company's performance. However, a QM system should not only meet the requirements of certification, but also cover the basis for a company-wide knowledge and information platform. Employees should be able to inform themselves about the stipulations, definitions and regulations independent of resources. Not at some point, but immediately, when a regulation has been made and is binding! This is the only way to implement the guidelines throughout the company and achieve the desired optimization!

Based on Microsoft **SharePoint online** / **Microsoft 365** and the flexible structure of the **Function Center**, the basic module of our **Service Board**, it is possible to set up the necessary documentation for all standards (DIN EN ISO 9001:2015-11, VDA 6.1 (automotive industry), IATF 16949 (automotive industry), EN 9100 (aviation), ISO 13485 (medical technology), TL 9000 (telecommunications) regardless of industry.

- Web-based system based on Microsoft SharePoint online as part of Microsoft 365
- Costs per user
- Free scalability
- Rules-based document management
- Authorization concept (only reading, also writing...)
- Record versioning available
- Effective date with seamless transition for follow-up rules
-

In addition, the Function Center is not only focused on "quality management"!

You can freely use and use all components in the company: hardware and software management (or articles), processes, parameter setting (from devices or machines) or simply manage your documents structured, digitally!

The implementation of the file management functionalities is described in detail in the user manual!

We will be happy to inform you and show you the possibilities that can be used cost-neutrally in addition to the **quality management system** with the **Function Center** module.

Of course, we are also happy to provide you with our **business solution for Microsoft SharePoint online or Microsoft 365** for all other modules. Talk to us:
